OZDEMIR PASA COFFEE MACHINES

Environmental Policy

Green mission:

Ozdemir Pasa Coffee Machines is dedicated to the production of high-quality Turkish coffee machines while minimizing our environmental impact. We strive to create a more sustainable and eco-friendly coffee industry through the adoption of environmentally responsible practices and the promotion of sustainable sourcing.

Green Strategy:

- 1. Sustainable sourcing:** We will prioritize all our vendors and assemblers to be environmentally responsible such sourcing the parts of the coffee machine from manufacturers that prioritize sustainability in their production processes and supply chain. This criterion will be applied to our all the big and small procurement activities at *Ozdemir Pasa Coffee Machines*.
- 2. Green Packaging:** For our packaging we will only hire a vendor that offers environmentally friendly materials and practices in the packaging of products.
- 3. Energy efficiency:** We will invest in energy-efficient equipment and practices, such as using LED lighting and implementing energy-saving strategies in our quality control processes and other business operations. Solar panels will be used in the office, and factory premises and employees will be educated and motivated to adopt sustainable practices and join the company's green mission.
- 4. Waste reduction:** We will implement a comprehensive waste management program to minimize the amount of waste generated in our production, and distribution process and work towards zero waste.
- 5. Carbon footprint reduction:** We will offset our carbon emissions through the use of renewable energy sources and the support of carbon offset projects. We will track our carbon footprint at every level of the business operations and identify measures to reduce it.
- 6. Sustainability Consultant:** In the long run as the company operations grow, we aim to hire an sustainability consultant to work with us full time/ part time to track our carbon footprint, help execute our green strategy and achieve the green agenda.

By implementing these strategies, we aim to reduce our environmental impact and contribute to the creation of a more sustainable coffee industry.
